SUMMARY

AI Engineer who ships production agentic systems across tutoring, business audits and real-time voice. Builds LangGraph orchestration, curriculum-aware RAG and streaming services that survive disconnects, with Python backends and TypeScript interfaces.

SKILLS

Languages	Python, TypeScript, JavaScript, Java, SQL
AI Systems	LangGraph, LangChain, agentic workflows, tool calling, RAG, embeddings, Qdrant, semantic search, prompt engineering
Model APIs	OpenAI API, Gemini API, Anthropic Claude API
Backend & Product	FastAPI, Node.js, PostgreSQL, Redis, SSE streaming, WebSockets, LiveKit, React, Next.js
Cloud & DevOps	Azure DevOps, CI/CD, Docker, Git, Power BI

EXPERIENCE

AI Engineer – YoLearn.ai Oct 2025 – Present
Noida, India (Hybrid)

- Engineered a context-aware tutoring agent over a registry of **100+ tools**, combining LangGraph orchestration, dynamic tool selection and Qdrant retrieval to run multi-step student requests grounded in curriculum content.
- Built **Prachaar AI's seven business-audit workflows** with concurrent execution and persistent workers, preserving specialist findings, evidence citations and executive synthesis in saved reports.
- Made streaming resilient: added resumable runs and retained SSE streams across Python services and a JavaScript gateway, so clients reconnect mid-run and recover full response history after interruptions.
- Wired LiveKit and Gemini voice sessions to persistent onboarding and lesson checkpoints, letting English-coaching sessions resume from saved learner progress.

Associate System Engineer Intern – MAQ Software Aug 2025 – Oct 2025

- Automated build and release pipelines in Azure DevOps and developed SQL-backed Power BI dashboards with scheduled refreshes for recurring reporting.

Associate Software Engineer Intern – Better Software Jul 2025 – Aug 2025

- Delivered React features integrated with REST APIs; contributed production debugging and code reviews to resolve issues in live application workflows.

Java Developer Intern – TPF Technologies Jul 2024 – Oct 2024

- Implemented Java REST endpoints, SQL queries and relational persistence logic for backend application features.

PROJECTS

APCAN – Voice-driven healthcare administration github.com/Iam-shyamrathore/APCAN

- Connected Gemini Live conversations to LangGraph agents for patient intake and appointment scheduling, turning spoken requests into healthcare administration workflows.
- Built FastAPI and WebSocket services with PostgreSQL persistence, FHIR R4 resources, JWT role-based access, PII redaction and audit logging.

SIIN – Developer skill inference from GitHub evidence github.com/Iam-shyamrathore/graph-skill-infrence

- Built heterogeneous repository graphs with NetworkX and TF-IDF, then used LLM-guided Monte Carlo Tree Search to explore evidence of developer skills.
- Applied Dempster-Shafer scoring to express inference confidence; exposed results through FastAPI and a React graph explorer for inspecting skill relationships.

Previo (ArchPay) – Cloud architecture and cost studio previo.tech

- Built a collaborative Next.js architecture canvas with scenario branches and an AI copilot for exploring infrastructure designs.
- Tied typed service catalogs, graph constraints and cost calculations to PostgreSQL, Redis and BullMQ workers, keeping calculations tied to structured service data.

EDUCATION & RESEARCH

BTech, Computer Science and Engineering – Galgotias University 2022 – 2026
CGPA: 8.4/10 | SIIN paper accepted at ACIFFS 2026 (Intl. Conf. on Advances in Computational Intelligence for Fluid and Fuzzy Systems)
